

Matias Gonzalez

Backend Developer — Trainee / Junior

Buenos Aires, Argentina
Open to remote & hybrid · onsite OK
matiaszequielgonzalez365@gmail.com
github.com/matiasglez

PROFILE

Computer programming student (UNAB) and backend developer in training. Main project: a **production-deployed e-commerce REST API** built with Django REST Framework — 78 automated tests, JWT auth and Mercado Pago payments. The VOLT Store frontend is only a demo consumer used to exercise the API end-to-end. Looking for a **trainee or junior backend** role.

PROJECTS

E-commerce API — Django REST Framework 2026

Python · Django · DRF · PostgreSQL · Docker · JWT · Mercado Pago · [github.com/matiasglez/ecommerce-backend](#) · [live Swagger](#)

- Checkout uses DB transactions and `select_for_update` to prevent stock overselling.
- Idempotent Mercado Pago webhook with HMAC-SHA256 signature verification.
- 78 automated tests, GitHub Actions CI, deployed on Render.
- OpenAPI/Swagger docs and a reproducible demo seed.

VOLT Store — demo frontend for the API 2026

Next.js · TypeScript — [github.com/matiasglez/volt-store](#) · [live demo](#)

- Minimal UI to exercise the full backend flow: register, cart and payment (MOCK + Mercado Pago).

EDUCATION

Associate degree in Programming — UNAB in progress · 2026

1st year, 2nd semester

CS50P: Introduction to Programming with Python — Harvard University may–aug 2026

David J. Malan · certificate

Python 3 & web development with Django/Flask — Udemy dec 2024

Victor Robles · 30.5 hours · certificate

SKILLS

- Python
- Django
- Django REST Framework
- PostgreSQL
- Docker
- JWT
- REST
- Git / GitHub
- GitHub Actions
- Linux (basic)

LANGUAGES

Spanish — native
English — A2 (in progress; A1 certificate). Daily self-study.
